PLEASE READ THE FOLLOWING INSTRUCTIONS CAREFULLY

1. This question paper consists of 28 pages and an Information Sheet of 2 pages(i-ii). Please check that your question paper is complete.

2. Read the questions carefully.

3. **Answer ALL the questions on the question paper and hand this in at the end of the examination.**

4. You may use an approved non-programmable and non-graphical calculator, unless otherwise stated.

5. All necessary working details must be clearly shown.

6. Round off your answers to one decimal digit where necessary, unless otherwise stated.

7. Ensure that your calculator is in **DEGREE** mode.

8. It is in your own interest to write legibly and to present your work neatly.

9. The last pages can be used for additional working, if necessary. If this space is used, make sure that you indicate clearly which question is being answered.
SECTION A

QUESTION 1

Refer to the sketch below:
AD//BC. A is the point (−2; 4) and D is the point (1; -5).

Determine:
1.1 the coordinates of B. (2)

1.2 the equation of BC in the form \( ax + by + c = 0 \). (4)
1.3 the coordinates of C. (2)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

QUESTION 2

Refer to the sketch below:
\( \Delta ABC \) has vertices of \( A(0; 3) \), \( B(-3; -2) \) and \( C(5; 0) \).

2.1 Calculate the length of: (4)
2.1.1 \( AB \)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

2.1.2 \( BC \)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
2.1.3 AC

________________________________________________________________________
________________________________________________________________________

________________________________________________________________________

2.2 Hence, show that $\triangle ABC$ is a right angled isosceles triangle. \hfill (4)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

________________________________________________________________________

2.3 Determine the area of $\triangle ABC$.

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

________________________________________________________________________

2.4 Given that BC is a diameter of the circumscribed circle of $\triangle ABC$, show that the centre of this circle is M, the point $(1; -1)$. \hfill (2)

________________________________________________________________________
________________________________________________________________________

________________________________________________________________________

[12]
QUESTION 3

Find the equation of the line that is a tangent to the circle

$$(x + 1)^2 + (y + 2)^2 = 20$$
at $$(3; -4)$$. (6)
QUESTION 4

If $37\cos\theta + 10 = -2$ and $\theta \in [180^\circ; 360^\circ]$, determine, with the use of a diagram, the value of $\frac{1}{4}\frac{\sin 2\theta}{\cos \theta}$.

\begin{equation}
\frac{1}{4}\frac{\sin 2\theta}{\cos \theta}.
\end{equation}
QUESTION 5

5.1 Prove: \[ 1 - \cos(90° - 2\theta) \tan(180° + \theta) = \cos 2\theta \] (5)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

5.2 For which values of \( \theta \) is this identity in 5.1 undefined? (2)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

[7]
QUESTION 6

Evaluate without using a calculator:

6.1 \( \cos 3^\circ \cdot \cos 318^\circ + \cos 267^\circ \cdot \sin 42^\circ \) 

6.2 \( \tan^2 210^\circ - (1 + \cos 120^\circ) \cdot \sin^2 225^\circ \)
QUESTION 7

The table gives the Olympic pole vault records for the past 12 games Olympic games.

<table>
<thead>
<tr>
<th>Year</th>
<th>Height in metres</th>
</tr>
</thead>
<tbody>
<tr>
<td>1968</td>
<td>5.40</td>
</tr>
<tr>
<td>1972</td>
<td>5.50</td>
</tr>
<tr>
<td>1976</td>
<td>5.50</td>
</tr>
<tr>
<td>1980</td>
<td>5.78</td>
</tr>
<tr>
<td>1984</td>
<td>5.75</td>
</tr>
<tr>
<td>1988</td>
<td>5.90</td>
</tr>
<tr>
<td>1992</td>
<td>5.80</td>
</tr>
<tr>
<td>1996</td>
<td>5.92</td>
</tr>
<tr>
<td>2000</td>
<td>5.90</td>

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

7.4 Use the model to predict the record pole vault height for the 2016 Olympic Games. (1)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

7.5.1 Use the model to predict the record pole vault height for the 2028 Olympic Games. (1)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

7.5.2 Do you think the actual record in 2028 will be higher or lower than this prediction? Give a reason for your answer. (2)

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
QUESTION 8

In the diagram, O is the centre of the circle passing through A, B, C and D. AB//CD and \( \hat{B} = 20^\circ \).

Complete the following statements and reasons to prove that AOEC is a cyclic quadrilateral. No extra steps/calculations are allowed. (5)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \hat{C}_1 = \ldots \ldots )</td>
<td>alt. angles ; AB//CD</td>
</tr>
<tr>
<td>( \hat{O}_1 = 40^\circ )</td>
<td></td>
</tr>
<tr>
<td>( \hat{D} = 20^\circ )</td>
<td></td>
</tr>
<tr>
<td>( \hat{E}_1 = \ldots \ldots )</td>
<td>ext. angle of ( \triangle )</td>
</tr>
<tr>
<td>( AOEC \ is \ a \ cyclic \quad )</td>
<td></td>
</tr>
</tbody>
</table>

[5]
QUESTION 9

9.1 Complete the following statement:

The line from the centre of the circle perpendicular to the chord ______________
___________________________.

(1)

9.2 Refer to the figure below:

In the circle with centre O. OT ⊥QP, OS ⊥PR, OT = 8 units, PQ = 30 units and
PR = 23 units.

Determine OS = x.

(5)
QUESTION 10

Refer to the figure below:
PQ and PS are tangents to circle QRST. ST, RS and RQ are chords and QS is joined.
PQ//ST. Let $\hat{S}_2 = x$.

10.1 Calculate $\hat{Q}_1$ in terms of $x$.  

---

[Diagram of a circle with tangents and chords labeled Q, R, S, T, P, and angles marked with $\hat{1}$, $\hat{2}$, $\hat{3}$, $\hat{4}$, and $\hat{x}$]
10.2 Prove: $\triangle RSQ \sim \triangle RQP$  

10.3 Prove: $QR^2 = RS \cdot RP$
SECTION B

QUESTION 11

The circle, with equation $x^2 - 10x + y^2 + 8y - 40 = 0$, is given. A point $P(x; y)$ on the circumference of a NEW circle, is such that it is always 3 units from the circumference of the original circle, and outside the original circle.

Determine the equation of this new circle. (6)
QUESTION 12  

Solve for $x$ correct to one decimal digit if $\theta \in [-180^\circ; 180^\circ]$  

\[ \sin(2\theta - 10^\circ) = -\cos (\theta + 50^\circ). \]  

[8]
QUESTION 13

The company, Mega Ski, has sales of ski equipment as given by

\[ S(t) = 10[1 - \cos(30^\circ \cdot t)] \]

where \( t \) is the time, in months (\( t = 0 \) corresponds to 1 August 2015), and \( S(t) \) is in thousands of Rands.

13.1 Use the given graph paper below to sketch the function of the sales on a 12-month interval [0; 12].

![Graph paper for plotting sales function](image)

PLEASE TURN OVER
13.2 What is the period of the function? (2)

________________________________________________________________________

________________________________________________________________________

13.3 What is the minimum amount of sales? (1)

________________________________________________________________________

________________________________________________________________________

13.4 What is the maximum and when does the maximum amount of sales occur? (3)

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

[10]
QUESTION 14

At a particular time during the day, a tower of height 19,2 metres casts a shadow. At the same time, a person who is 1,65 metres tall casts a shadow 5 metres long.

What is the length of the shadow cast by the tower at that time?

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
QUESTION 15

A new fitness centre offers two different fitness classes. The attendance for each class for 12 sessions is represented in the box-and-whisker plot.

15.1 Determine the interquartile range of Class A. (1)

15.2 Compare the data from Class A and Class B. How are they alike? (1)

15.3 Compare the data from Class A and Class B. How are they different? (1)

15.4 Which class has more variability? Show calculations to support your answer. (3)

15.5 Which class has a higher mean deviation? Explain your answer. (2)
QUESTION 16

Refer to the sketch below:

In the diagram O is the centre of the circle with AE and CE tangents to the circle.
\( \hat{C}_1 = 45^\circ \) and \( \hat{O}_1 = 127^\circ \)

Calculate the size of \( \hat{E} \). (5)

[DIAGRAM WITH ANGLES AND POINTS Labeled A, B, C, D, E, AND O WITH ANGLES 45°, 127°]
QUESTION 17

In the diagram below, points R, P, A, Q and T lie on a circle. RA bisects \( \hat{R} \) and \( AB = AQ \).
RA and TQ produced meet at B.

Prove that:

17.1 AQ bisects \( \hat{PQB} \).  

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

17.2 TR = TB.  

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

________________________________________________________________________
17.3 \( \hat{P} = T\hat{R}P \) (3)
QUESTION 18

Refer to the sketch:

In the circle below, AB and CD are chords intersecting at E.

If AE = 5, BE = 12 and CE = 6, what is the length of DE? (6)

[6]
QUESTION 19

Daniel decided to participate in this year’s Tour de France bicycle race. One of the routes are around the Annecy Lake which is a circular lake that has a diameter of 4 km, as shown in the diagram below. Points B and D are the opposite sides of Annecy Lake and lie on a straight line through the centre of the lake, with each point 5 km from the centre. The course of the race is ABCDE, where AB and DE are tangents to the lake.

Determine the length of the route. (6)
QUESTION 20

The diagram shows triangles ABC and ABD with AD parallel to BC. The sides AC and BD intersect at Y. The point X lies on AB such that XY is parallel to AD and BC.

20.1 Prove $\triangle ABC \parallel \triangle AXY$. (4)

\[ \frac{1}{XY} = \frac{1}{AD} + \frac{1}{BD} \]  

(6)

20.2 Hence, or otherwise, prove that $\frac{1}{XY} = \frac{1}{AD} + \frac{1}{BD}$
TOTAL FOR SECTION B = 73 MARKS

TOTAL: 150 marks
